DETAILED ACTION

1. Claims 1-17 and 21-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per claim 1, the recitation "one of said input to the finite field multiplier circuit being the output of the finite field multiplier circuit", lines 10-11, appears misdescriptive.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3,5,7 and 9-15 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Weng (6,374,383).

Weng et al. disclosed in figure 2 a data processing system for determining at least one of locations and magnitudes of errors in a received code word via respective coefficients of at least part of one of an error-locator polynomial and an error-evaluator polynomial of degree t in at least part of an inversion-free Berlekamp-Massey algorithm, wherein t is an integer, the system including a plurality of arithmetic units, each arithmetic unit comprising a finite field multiplier circuit (26) having an output coupled to an input of at least one finite field adder circuit (30) for selectively performing at least two finite field arithmetic calculations between values associated with said received code word presented at two inputs to the finite field multiplier circuit and a

further value associated with said received code word presented at two inputs to the finite field adder circuit, one of said inputs to the finite field multiplier circuit being the output of the finite field multiplier circuit and the other of said inputs to the finite field multiplier circuit being adapted to receive further input data, such that the data processing system includes no more than (t+1) finite field multiplier circuits; memory (24) for storing a previous finite field arithmetic calculation result of a first arithmetic unit of the plurality of arithmetic units for use in a current finite field arithmetic calculation of the first arithmetic unit; and at least one finite field adder circuit (30) for combining respective finite field arithmetic calculation results of respective current finite field arithmetic calculations of at least two of the arithmetic units as claimed (see col. 4, lines 29-62).

4. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chuong D. Ngo whose telephone number is (571) 272-3731. The examiner can normally be reached on Monday-Friday.
